

PROFILE — Creative and technically curious undergraduate student pursuing a B.A. in English while developing practical experience across video editing, graphic design, web development, Android/Linux environments and independent software projects. Works as a freelance video editor on paid client projects and enjoys combining creative production with technology. Currently expanding software-development skills through hands-on projects and AI-assisted coding workflows.

EDUCATION

B.A. in English

Aliah University, Kolkata

4-Year Undergraduate Programme

Currently: 2nd Year · Semester 3

Started: 2025

Expected Graduation: 2029

EXPERIENCE

Freelance Video Editor

Paid Client Projects

Freelance

- Delivered video-editing work for paid clients as an independent freelancer.
- Adapted pacing, visuals, transitions and presentation according to client requirements.
- Used CapCut and Alight Motion for editing and motion-focused creative work.
- Managed projects independently from brief interpretation through final delivery.

Independent Developer & Creator

Personal Projects · Technology · Open Source

Ongoing

Building and experimenting with web applications, Android/Linux environments, automation and independent software projects. Uses AI-assisted coding as part of an active learning process while developing practical understanding through implementation, debugging and experimentation.

FEATURED WORK

Study Sphere

EDUCATION PLATFORM · WORKING SUCCESSFULLY

An education-focused digital platform designed around study, organization and productivity. Study Sphere brings together digital study resources and practical productivity concepts into a unified environment.

SELECTED PROJECTS

RITS WAP

WEB PROJECT

A successfully working web project developed and maintained through GitHub, involving practical experimentation with deployment, hosting, networking and making web applications accessible through modern infrastructure.

ADDITIONAL PROJECT

Termux Automation & CLI Workflows

ANDROID · LINUX · AUTOMATION

Customized command-line workflows on Android using Termux, including simplified commands, media utilities, automation experiments and Linux-based development workflows. The project reflects an interest in turning mobile hardware into a practical development environment.

- Google Cloud
- Self Hosting
- CLI Workflows

TECHNICAL APPROACH

Learn · Build · Debug · Improve

Development is approached through hands-on experimentation. AI-assisted coding is used as a learning aid while projects are implemented, tested, debugged and refined. This approach allows unfamiliar technologies to be explored through practical use rather than theory alone.

CAREER DIRECTION

Build a professional presence that brings together creative media, graphic design and technology while continuing to grow as a developer and independent creator. The long-term focus is on creating useful digital products and high-quality visual work that can be showcased through a personal portfolio and professional website.

OPEN SOURCE & PROJECTS

GitHub

DEVELOPMENT PROJECTS & EXPERIMENTS

Independent development work, experiments and project repositories are maintained through GitHub.
